

Arlington & Salisbury Police – Pictometry™ reference

Introducing Pictometry™ was a good choice for Arlington & Salisbury Police. The Pictometry™ technology is for them a proven and powerful information system that takes preplanning and crisis management tools for first responders to the next level.

“The possibilities are endless. It is going to be a very handy tool.” Robert Roy, Sergeant, Salisbury Police, MA, USA.

The key applications which help in the daily Police job are:

- Search, raid and seizure planning
- Position surveillance operations
- Identify staging areas
- Accident reconstruction
- Pre-emptive and concurrent tactical planning
- Target hardening
- Crowd control and evacuation
- Traffic control analysis, planning and routing
- Historical archiving of pictorial crime statistics and data
- Pictorial references for court presentations
- Land/air coordination in search and rescue efforts
- Set up foot chase/crime in progress perimeters in seconds
- Turn night into day and see into shadows.

“If another county asked us if Pictometry has been a worthwhile investment and something they should consider, I would absolutely recommend it to them.” M. Jay Farr, Deputy Chief, Arlington County Police Department, Arlington, VA, USA
