

Lexington & Polk County Fire Department – Pictometry™ reference

With Pictometry™, dispatchers and emergency responders around the country can literally take the search out of rescue efforts and literally know before they go. With desktop and online solutions available for added convenience and mobility, Pictometry™ users can:

- Confidently identify the location of an emergencies
- Instantly access multiple, high resolution oblique views
- See, measure and plan – directly on imagery

“Just the other day there was house fire and people trapped inside. First responders accessed Pictometry remotely and were able to measure the rooftop and make some critical decisions before even arriving on the scene. All three people were rescued and Pictometry was the critical and essential piece of technology that made it happen.” Jack Maguire, Lexington County, SC, USA.

“Our dispatcher at night can switch night in to daylight.” Larry Alexander, Public Safety Director, Polk County, Florida, USA.
