

## Rhode Island 911 Center & Central Police Services of Erie County – Pictometry™ reference

Pictometry™ allows dispatchers to instantly zoom in on exact coordinates for each property, identifying the location of incident areas for faster response. Multiple views help clarify on the scene information such as windows, exits, fences, construction type, location of water sources, or potential obstruction to rescue efforts.

*“Saving time means saving lives. We recognize the value Pictometry provides to call takers.” Raymond LaBelle, Executive Director, Rhode Island E911 Uniform Emergency Telephone System.*

Dispatchers provide remote guidance to first response crews on potential dangers to neighbouring structures or populations. For example, the technology is extremely useful for evaluating sites for obstacle that might not be seen at night such as power lines, trees, or other obstructions.

*“With Pictometry, a call taker can actually see where the call is coming form...You save a few seconds, you save a few minutes, you are going to save some lives.” Lou Oshier, Director of Communications, Central Police Services, Erie County, NY, USA.*
